

non bookable time

Posted by chrichro - 21 Led 2013 06:43

Is it possible to add a non bookable time before and after a reservation? (I want to let the customer rent something and it will be delivered by a parcel service - so this non bookable time would be the duration of the delivery on both ways).

Thank you for your help

Chris

Hello,

our component doesn't have this feature. You can only try to use this settings (but I am not sure, it is what you need):

Booking allows you to set minimal and maximal number of days for reservation. For example you will have 2 reservation types where 1st will be for 3 days and 2nd for 4 days. Delivery duration always get 2 days.

If you will need delivery days for free then it can be problem. Booking shows only item cost per day.

There is possibility to do it with deposit and price per day will costs 0. Then customer will pay deposit only once, no matter for how many days he will rent that thing.

If it is not optimal solution for you, I can only offer you customer support to modify booking component. If you are interested in, contact us on
