

Hard Bug

Posted by imk - 14 Jun 2013 06:47

Hello, when I add a new property in a old template, the others properties delete automatic.

This is a hard bug.

Hello,

what do you mean by old template?

I think there was another topic with similar problem, but I was not able to simulate it. Maybe this is key to find the problem.

The steps are, I create the template and I add new data to the product template. I add one more field to the template and go to add the product to keep and erased everything.

I can't still simulate it.

Tested on 2.0.4 and 2.0.6. Can you try to update your booking to 2.0.6?
