

Mturbo Magento admin panel very slow

Posted by atoum24 - 11 Zář 2011 13:45

I installed magento on the server of hostmonster and everything was ok.

I bought mturbo full version and when I installed the admin panel was too slow.

The site works fine and loads fast enough and be displayed in the footer timestamp

Hi,

we've got still problems with that queue. Is there any way to disable filling queue?

And we also have a another problems with dynamic block., automatic refreshing after create new products, rename categories etc..

Please advise..

Thanks

Dear Abigail,

Try to upgrade your M-Turbo to version 1.2.6, please.

If you contact me (

This is happening for me quite a bit and the admin comes to a crippling halt especially when trying to process orders.

Every couple of hours I have to run the command

UPDATE core_config_data SET value = '0' WHERE path LIKE 'mturbo/event/queue'

and it works fine again. I am on v.1.2.6 is there a later version or plans to prevent this from slowing things down?

Dear Gav,

Yes. We are planning next release in one month. I hope it is real deadline.

Hi,

Sorry to keep bothering you but is there an update on the module to support canonical url's?

Thanks

Gavin

Helo Gav,

Thank you for your interest. No, yet. We are planning new release in the coming months.
