

2.5 million SEF urls > Virtuemart + CherryPicker

Posted by ozzzz - 07 Mai 2015 06:22

Hi!

I use the module CherryPicker on my Virtuemart2 shopto let my visitors filter my categories. On one category I give 3 filtering methods (quality, color, size), each with several options.

Somehow, all the options the cherrypicker gives, are stored as SEF urls. This resulted in 2.5 million (!!)
sef urls and my shop to experience problems.

I see that the VM extension in JoomSeF 4 gives a few options for the cherry picker plugin, but I dont see how I can turn off the SEF URL generation?

How can I disable the SEF url creation of options that cherry picker gives?

I got a solution:

In the JoomSeF extensions pay for the Virtuemart plugin and in there, set inside the "extension settings" the "cherry picker settings" to yes:

Add product type to URL

Add product type ID to URL

Add product type parameter name to URL

Now go to the tab "Common", still inside the virtuemart plugin of Joomsef, and add in "Custom non-SEF variables" the variables that you use for the filtering of CherryPicker. I inserted "type;quality" and now these values are not used in the SEF urls!
